Servus zusammen,  
momentan ist echt der Wurm drin... Bekomme beim Brennen von CDs immer den o.g. Fehler (siehe auch Anhang), danach wird abgebrochen und ich kann die Disc in die Tonne werfen. Treiber habe ich schon deinstalliert und neu gestartet, hat nix gebracht. Wäre toll wenn jemand da ne schnelle Info zu hätte!  
Danke und Gruß

The screenshot shows the Nero Express software interface during a burning process. The window title is "Nero Express" and the main heading is "Burning Process". Below the heading, it says "Please wait...". A table of events is displayed, showing the following entries:

Time	Event
14:16:59	TSSTcorp CDDVDW TS-L632H Super Link activated
14:17:00	Burn process started at 24x (3.600 KB/s)
14:17:25	DMA-driver error, CRC error E: TSSTcorp CDDVDW TS-L632H

Below the event log, there are icons for a computer monitor, a document, and a CD. The "ULTRA BUFFER" logo is visible on the right. At the bottom, the process status is shown as "Writing at 24x (3.600 KB/s)" with a progress bar at 6%. The remaining time is 00:01:41 and the total time is 00:01:50. A "Stop" button is located at the bottom right.
