You may, or you may not know Tricopigmentation.

Tricopigmentation is seen by many surgeons as a perfect alternative when hair transplants are not an ideal solution (usually when there is very little donor reserves).

At Prohairclinic we recognised the importance of this technique early on. Our Tricopigmentation specialists have been trained by Milena Lardi personally. Milena is the inventor of the modern Tricopigmentation, which is an advanced method of pigmentation dedicated for the scalp.

It takes 3-4 treatments in a 4-6 weeks period to achieve the final result.

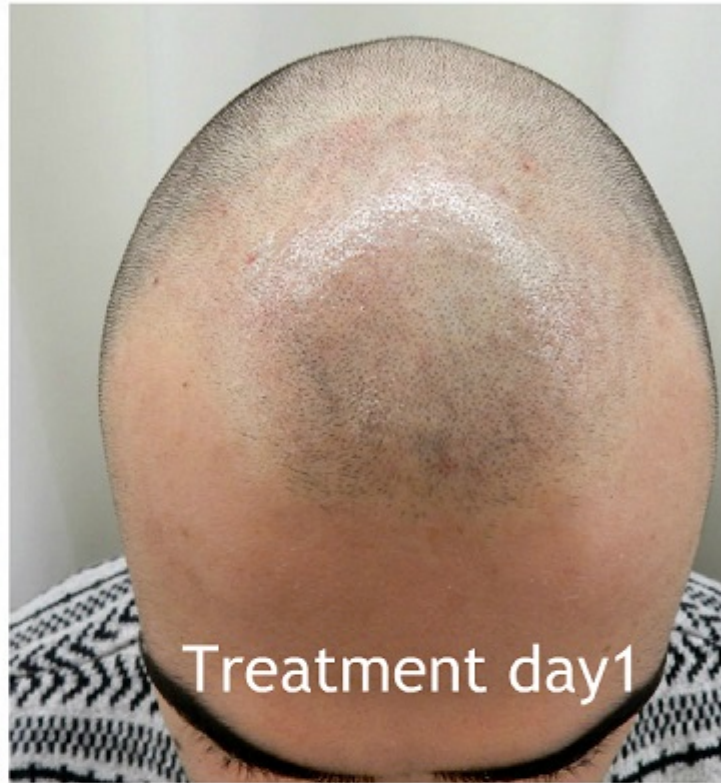

Here an example of the different stages
