Hi Leute,

hat jemand Erfahrungen mit der Belgravia Centre Klinik aus London?

Ich habe mich dort online beraten lassen und würde gerne dort meine Produkte beziehen (wirkten mir relativ professional und die Kombi schien sinnvoll, habe mich ein bisschen durch's Forum gelesen, aber ein paar von euch haben hier glaub ich wesentlich mehr Ahnung).

Nun verlangen die 1040,20GBP (~1200EUR) für 1 Jahr Behandlung (Finasterid 1mg Tabletten; Minoxidil 12,5% + Azelaic Acid 5% Creme).

Ist das Abzocke oder einfach der Premium-Preis den man für das Nicht-groß-nachdenken und den Service/Beratung/Betreuung bezahlt?

Wen's interessiert hab ich nochmal 2 Auszüge aus den Mails angehängt. Und danke schonmal an jeden, der sich hier die Zeit nimmt, zu schreiben.

Your treatment recommendation options

Finasteride 1mg tablets

Finasteride is one of only two medications licensed to treat Male Pattern Hair Loss. It prevents hair loss by blocking Dihydrotestosterone (DHT), which is the product produced by the body that destroys healthy hair follicles. As Finasteride is a prescription medication so please ensure you read the leaflet contained with the product before taking the medication. Please note that the leaflet may have been updated. For more information on Finasteride, or details on how to take it, please read the following page - <http://www.belgraviacentre.com/aindeem-finasteride-1mg-treatment/>

Minoxidil 12.5% + Azelaic Acid 5% cream

Minoxidil 12.5% + Azelaic Acid is Belgravia's unique extra-strength hair regrowth cream. Minoxidil is a prescription medication that works by increasing blood supply to the hair follicles. It is proven to prevent hair loss and regrow hair. As minoxidil is a prescription medication, Belgravia's specialists have found that higher doses can dramatically increase results. Azelaic Acid is a topical cream that works by blocking DHT - the product in the body that causes genetic hair loss, ensuring the increased blood flow is delivered directly to the hair follicles. Azelaic Acid also has anti-inflammatory effects which are useful for other conditions such as Alopecia Areata and Traction Alopecia. Our cream is suitable for use on all types of hair loss such as a receding hairline or balding crown. The texture of the cream means you can directly target the hair follicles to achieve maximum levels of hair restoration. Minoxidil 12.5% + Azelaic Acid is a prescription medication so please read the leaflet contained with the product before starting to use it.

The advantages of a 'Combination treatment course'

Minoxidil and Finasteride are extremely complimentary to one-another due to the way that they work together to achieve optimum results. Finasteride works by removing DHT from the blood whilst minoxidil delivers nutrients directly to the hair follicles as possible. This ensures that whilst all the nutrients needed for healthy hair growth are being delivered to the hair follicles, Finasteride is removing the fundamental cause of genetic hair loss - DHT.
