Hi Leute,

hat jemand Erfahrungen mit der Belgravia Centre Klinik aus London?

Ich habe mich dort online beraten lassen und würde gerne dort meine Produkte beziehen (wirkten mir relativ professional und die Kombi schien sinnvoll, habe mich ein bisschen durch's Forum gelesen, aber ein paar von euch haben hier glaub ich wesentlich mehr Ahnung).

Nun verlangen die 1040,20GBP (~1200EUR) für 1 Jahr Behandlung (Finasterid 1mg Tabletten; Minoxidil 12,5% + Azelaic Acid 5% Creme).

Ist das Abzocke oder einfach der Premium-Preis den man für das Nicht-groß-nachdenken und den Service/Beratung/Betreuung bezahlt?

Wen's interessiert hab ich nochmal 2 Auszüge aus den Mails angehängt. Und danke schonmal an jeden, der sich hier die Zeit nimmt, zu schreiben.

Your treatment recommendation options

Finasteride 1mg tablets

Finasteride is one of only two medications licensed to treat Male Pattern Hair Loss. It prevents hair loss by blocking the production of Dihydrotestosterone (DHT), which is the product produced by the body that destroys healthy hair follicles. As a prescription medication so please ensure you read the leaflet contained with the product before taking the medication. The leaflet you receive as the leaflet may have been updated. For more information on Finasteride, or to purchase your medication please read the following page - <http://www.belgraviacentre.com/aindeem-finasteride-1mg-treatment>

Minoxidil 12.5% + Azelaic Acid 5% cream

Minoxidil 12.5% + Azelaic Acid is Belgravia's unique extra-strength hair regrowth cream. Minoxidil is a vasodilator which increases blood supply to the hair follicles. It is proven to prevent hair loss and regrow hair. As minoxidil is a vasodilator, Belgravia's specialists have found that higher doses can dramatically increase results. Azelaic Acid is a retinoid which blocks DHT - the product in the body that causes genetic hair loss, ensuring the increased blood flow is not blocked. The effects which are useful for other conditions such as Alopecia Areata and Traction Alopecia. Our cream is specifically designed for hair loss such as a receding hairline or balding crown. The texture of the cream means you can directly apply it to the scalp to reach maximum levels of hair restoration. Minoxidil 12.5% + Azelaic Acid is a prescription medication so please read the leaflet with the product before starting to use it.

The advantages of a 'Combination treatment course'

Minoxidil and Finasteride are extremely complimentary to one-another due to the way that they work. Minoxidil works by increasing blood supply to the hair follicles to achieve optimum results. Finasteride works by removing DHT from the blood whilst minoxidil delivers nutrients to the follicles as possible. This ensures that whilst all the nutrients needed for healthy hair growth are being delivered, the body does not contain the fundamental cause of genetic hair loss - DHT.
