Alopecia Areata. also known as spot baldness, is a condition in which hair is lost from some or all areas of the body.

Often it results in a few bald spots on the scalp, each about the size of a coin.  
People are generally otherwise healthy. In a few all the hair on the scalp or all body hair is lost and loss can be permanent

Alopecia areata is believed to be an autoimmune disease

So far there are no cures that work 100%.

Using Tricopigmentation male AA sufferers have a good option to hide the bald spots.

Especially male sufferers make good candidates in order to hide the bald spots.
