hallo,

möchte einen dutagenvergleich machen. sind diese hier original?  
Ich glaube schon.

Bitte stellt auch eure fotos rein,

danke im voraus

# DUTAGE

(Dutasteride Soft Gelatin)

## COMPOSITION

Each soft gelatin capsule contains

Dutasteride 0.5 mg

## DESCRIPTION

Dutasteride is a synthetic 5- $\alpha$ -reductase inhibitor that is a selective inhibitor of 5- $\alpha$ -reductase (SR), an intracellular enzyme that converts testosterone to dihydrotestosterone (DHT) (3- $\alpha$ -androstano-17 $\beta$ -thio-5 $\alpha$ -androstane-2-one). It is a competitive and specific inhibitor of both type 1 and type 2 SR. The molecular weight of dutasteride is 384.5, representing a molecular weight of 384.5.

Chemical structure of Dutasteride

## Pharmacokinetics

### Effectiveness of Dutage

Dutasteride inhibits the conversion of testosterone to 5- $\alpha$ -dihydrotestosterone (DHT) by the inhibition of 5- $\alpha$ -reductase (SR) and subsequent enlargement of the prostate gland. It is the only development and subsequent enlargement of the prostate gland. The type 2 5- $\alpha$ -reductase inhibitor, which exists as 2 isomers, type 1 and type 2. The type 2 isomer is responsible for the type 1 isomer and is also responsible for the 5- $\alpha$ -reduction of testosterone in the SR. Dutasteride is a competitive and specific inhibitor of both type 1 and type 2 SR. The maximum effect of daily doses of dutasteride on the reduction of DHT is seen after 1 and 2 weeks of daily therapy with dutasteride 0.5 mg. Similar results are reported in patients with BPH treated with dutasteride 0.5 mg/day for 1 and 2 years and 10% of 2 years. The maximum increase in total testosterone was 10% of the starting range. In BPH patients treated with 0.5 mg/day of dutasteride or placebo for up to 12 weeks, mean DHT concentrations in prostatic tissue were significantly lower in the 0.5 mg group (approximately 20-30%). Mean prostatic fluid concentrations of dutasteride group compared with placebo (0.5 mg and 0.5 mg), respectively, 2-4 fold higher with significantly affected type 2 5- $\alpha$ -reductase activity also in sufficient males had a small prostate gland throughout the trial in our study. present a 10% or other direct 5- $\alpha$ -reductase activity 5- $\alpha$ -reductase activity. There is no data on the long-term safety and efficacy with dutasteride following 12 weeks of therapy.

Wo hast Du die denn bestellt ?

Sieht auf den Ersten Blick für mich original aus.

Mal noch ne andere Frage:  
Warum gibt es von Dr. Reddy's das Dutasteride mit unterschiedlichen Namen (Dutas und Dutagen)?

Bei der Seite,

[medicine-express.com](#)

super Abwicklung, aber leider liefern sie nur nach Österreich und nicht nach Deutschland.
