hallo,

möchte einen dutagenvergleich machen. sind diese hier original?
Ich glaube schon.

Bitte stellt auch eure fotos rein,

danke im voraus

DUTAGE

(Dutasteride Soft Gelatin)

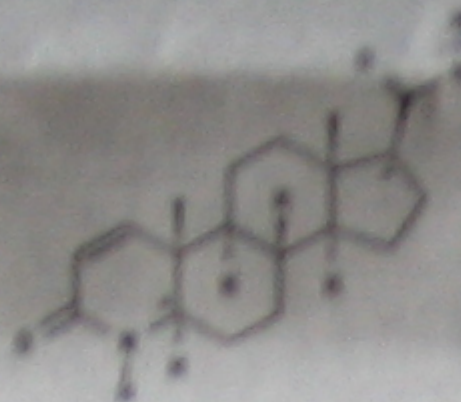

COMPOSITION

Each soft gelatin capsule contains

Dutasteride 0.5 mg

DESCRIPTION

Dutasteride is a synthetic 5- α -reductase inhibitor that is a selective inhibitor of 5- α -reductase (SR5), an intracellular enzyme that converts testosterone to dihydrotestosterone (DHT) (3- α -androstano-5- α -androst-16-en-2-one). Dutasteride is a competitive and specific inhibitor of both type 1 and type 2 5- α -reductase. Its molecular weight is 386.5.

Dutasteride
3- α -androstano-5- α -androst-16-en-2-one

Pharmacokinetics

Effectiveness of Dutage

Dutasteride inhibits the conversion of testosterone to 5- α -DHT, which is the active androgen in the prostate gland. This inhibition leads to the regression of the prostate gland and the subsequent improvement of the prostate gland. The type 2 5- α -reductase, which is located in the prostate gland, is the primary target of dutasteride. The type 1 5- α -reductase is also responsible for testosterone conversion in the skin. Dutasteride is a competitive and specific inhibitor of both type 1 and type 2 5- α -reductase. Its molecular weight is 386.5.

The maximum effect of daily doses of dutasteride on the reduction of prostate gland size is observed after 1 and 2 weeks of daily therapy with dutasteride 0.5 mg. The maximum effect is observed in patients with BPH treated with dutasteride 0.5 mg/day for 1 and 2 years. The maximum reduction in prostate gland size is 30% of the baseline value.

In BPH patients treated with 0.5 mg/day of dutasteride or placebo for up to 12 weeks, the mean SR5 concentration in prostatic tissue was significantly lower in the 0.5 mg group (approximately 20% of SR5) than in the placebo group. Concentrations of dutasteride group compared with placebo (0.5 mg and 0.5 mg), respectively 2- and 4-fold higher with significantly affected type 2 5- α -reductase activity also in different studies. The prostate gland size throughout the study is not directly related to the SR5 concentration. The maximum reduction in prostate gland size is observed following 12 weeks of therapy.

Wo hast Du die denn bestellt ?

Sieht auf den Ersten Blick für mich original aus.

Mal noch ne andere Frage:
Warum gibt es von Dr. Reddy's das Dutasteride mit unterschiedlichen Namen (Dutas und Dutagen)?

Bei der Seite,

[medicine-express.com](#)

super Abwicklung, aber leider liefern sie nur nach Österreich und nicht nach Deutschland.
